

Lake Macquarie City Council Australia

The Administration Building has a problem with mice & rats eating data and communication cabling installed therein

In the past, pest exterminators were engaged to distribute baits throughout the building in an attempt to eliminate the problem. This treatment was found to be time consuming and dangerous.

I have been continually looking for other methods of treating this problem and when Mr. Connell approached me and recommended I trial Pest Free I was sceptical however willing to trial this system. After nine months of using Pest Free the problem has been eliminated and other benefits have been gained as well.

I would recommend Pest Free to other councils and businesses.

I thank Mr. Connell for introducing me to this easy to use free of chemicals and environmentally friendly product.

W Johnson - Lake Macquarie City Council
